Perfect prints for less!

CHEMICAL AND WATER RESISTANCE

To test the chemical and water resistance of the tape, it was immersed in various liquids (water, alcohol, isopropyl alcohol, machine oil and other chemicals) for 24 hours. The tapes still adhere to their surfaces firmly with no change.

ABRASION RESISTANCE

After the abrasion resistance test, with 50 round-trip passes with a 1kg weighted sand eraser, Toner On Demand laminated tapes were only slightly scratched on the tapes but the printing was not effected.

LAMINATED TAPES

Our laminated tapes are able to adhere to almost any surface, including glass, stainless steel, PVC, phenolic resin, acrylic, polypropylene and polyester-coated wood. Even rough and irregular surfaces. They also have good performance in hot, cold and humid conditions.

WITHSTANDS TEMPERATURES

Our laminated tapes were tested on the surface of sandpaper rubbed stainless steel to measure the temperature resistance. Our tapes had no change after 2 hours storage at -30 degrees. The tapes with white backing slightly faded but the adhesion softened and strengthened by heating.

EASY PEEL

The adhesion of our tapes have a pressure sensitive adhesive design, which allows the tape to adhere to any surface leaving no gum residue once you have peeled the label from the backing.

DON'T BE BULLIED BY OEM MACHINE MANUFACTURERS.

Because if you do, you will loose the opportunity to make significant savings. In today's competitive marketplace, print machine manufacturers often use scare tactics to maintain their unrealistic profit margins, such as claiming the use of non-genuine toner cartridges will void the manufacturer's warranty.

This simply isn't true and, just like car manufacturers can't cancel your warranty because you chose a competitor to service your vehicle, you also have the right of choice when it come to consumables for your home or office equipment.
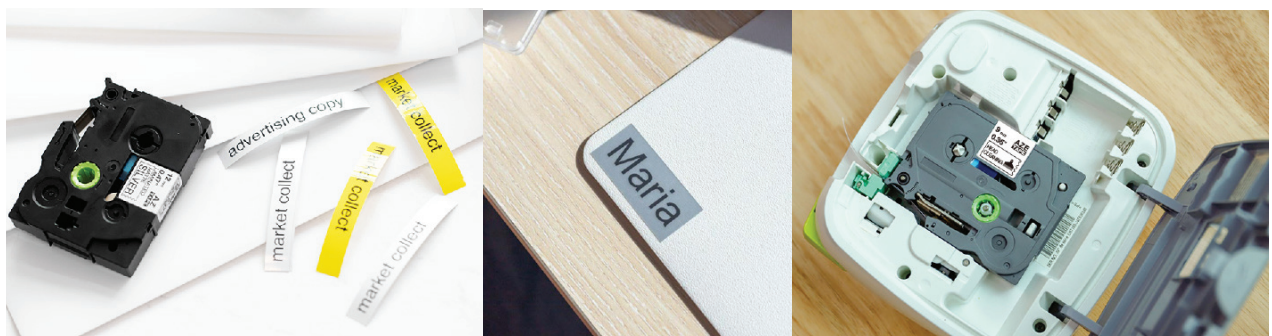

TAPE CASSETTES
